School of Interactive  
Computing

# Computational Investing, Part I

## ***221: Intro to Machine Learning***

*Find out how modern electronic markets work, why stock prices change in the ways they do, and how computation can help our understanding of them. Learn to build algorithms and visualizations to inform investing practice.*

## The Market is a “Big Data” Challenge

- ◎ **13,000 securities** trading in America
- ◎ **120** technical & fundamental factors
- ◎ **252** trading days per year

**= 1.96 Billion data points in 5 years**

**Machine learning can help!**

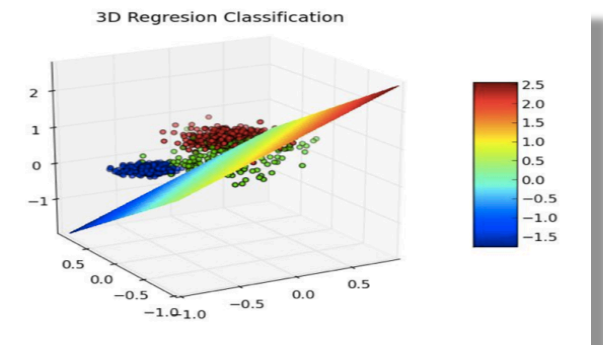

# What is Machine Learning?

“The construction and study of systems that can learn from data.”

--Wikipedia

## Major uses

- Classification:
  - What is it?
- Regression
  - A numerical prediction

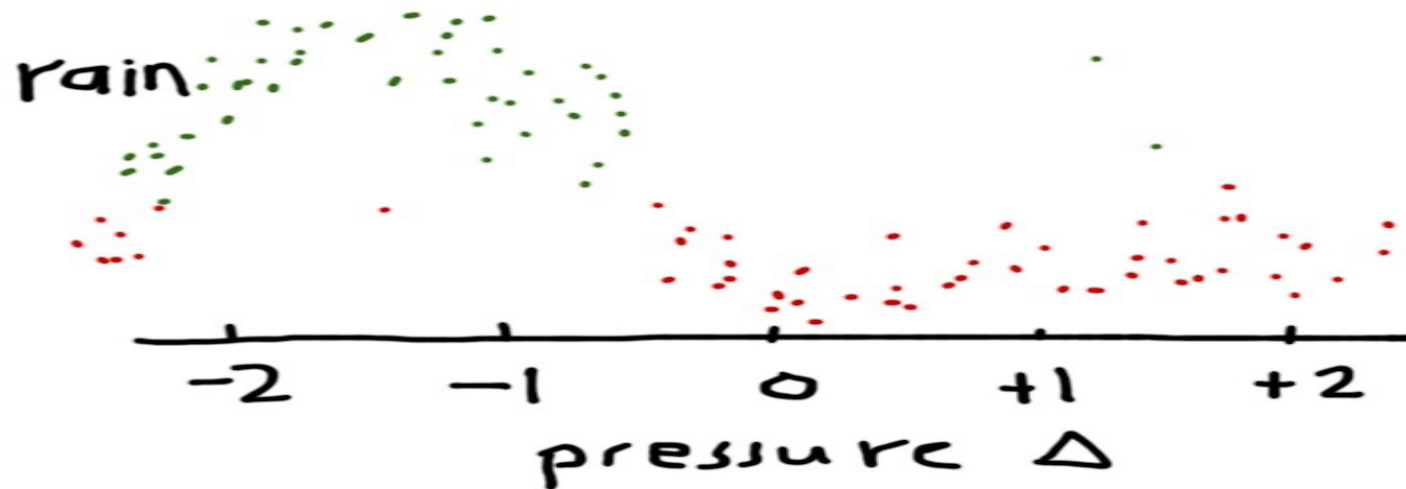

## Building a Model From Data

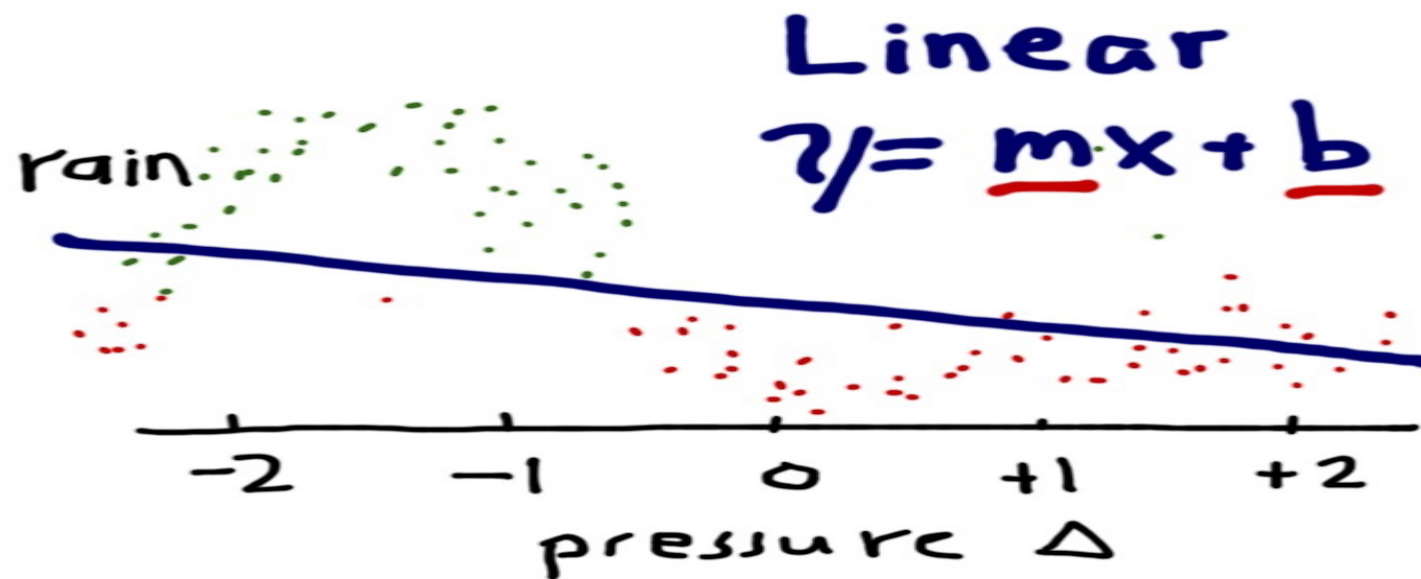

## Building a Model From Data

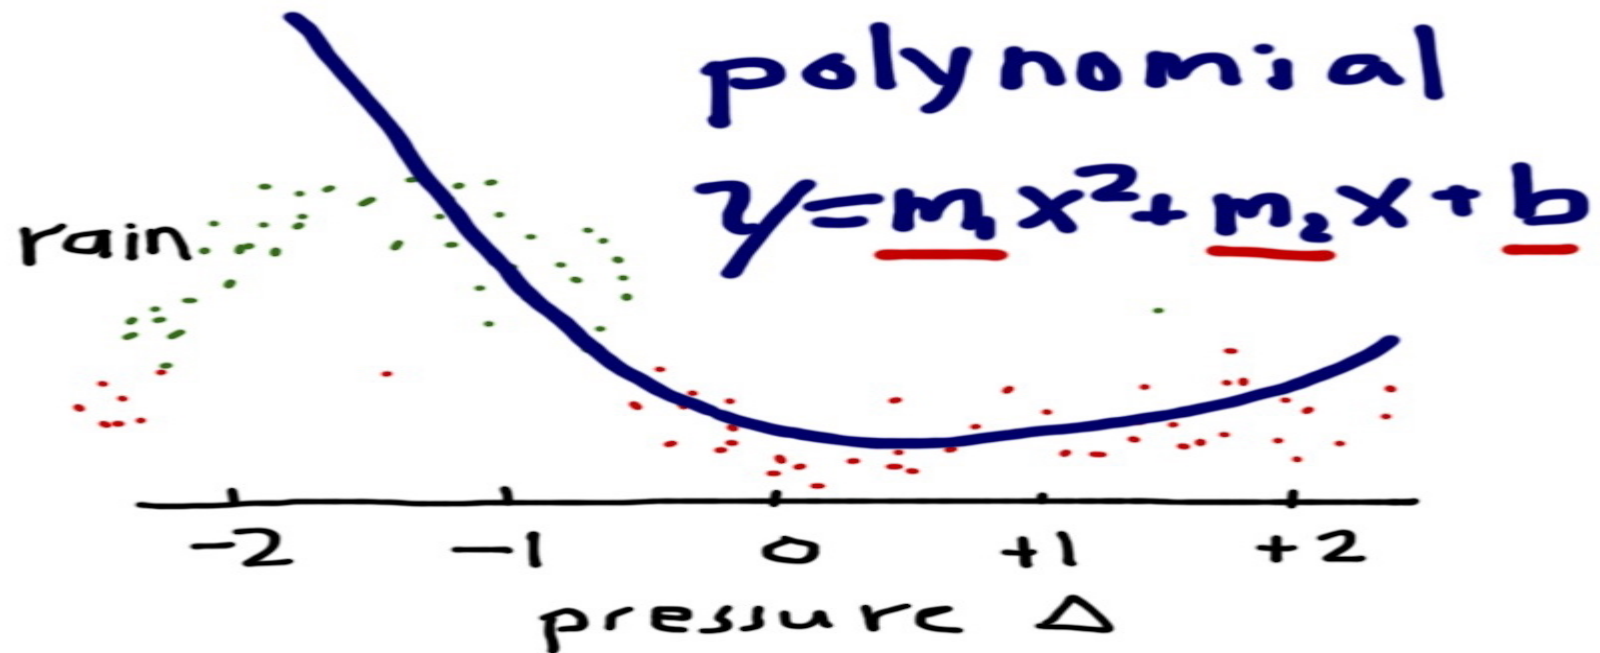

## Example: Predict How Much Rain

## Solution 1: Parametric Model

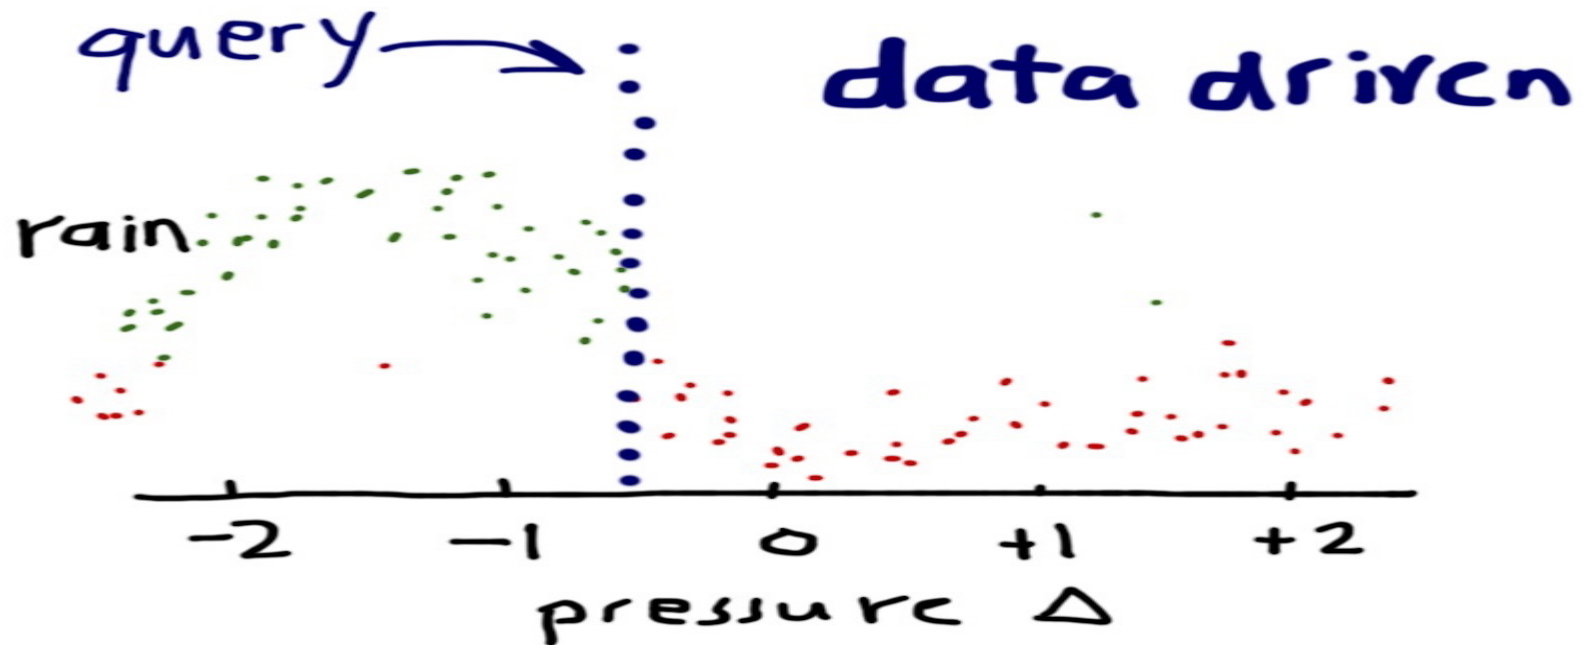

## Solution 1: Parametric Model

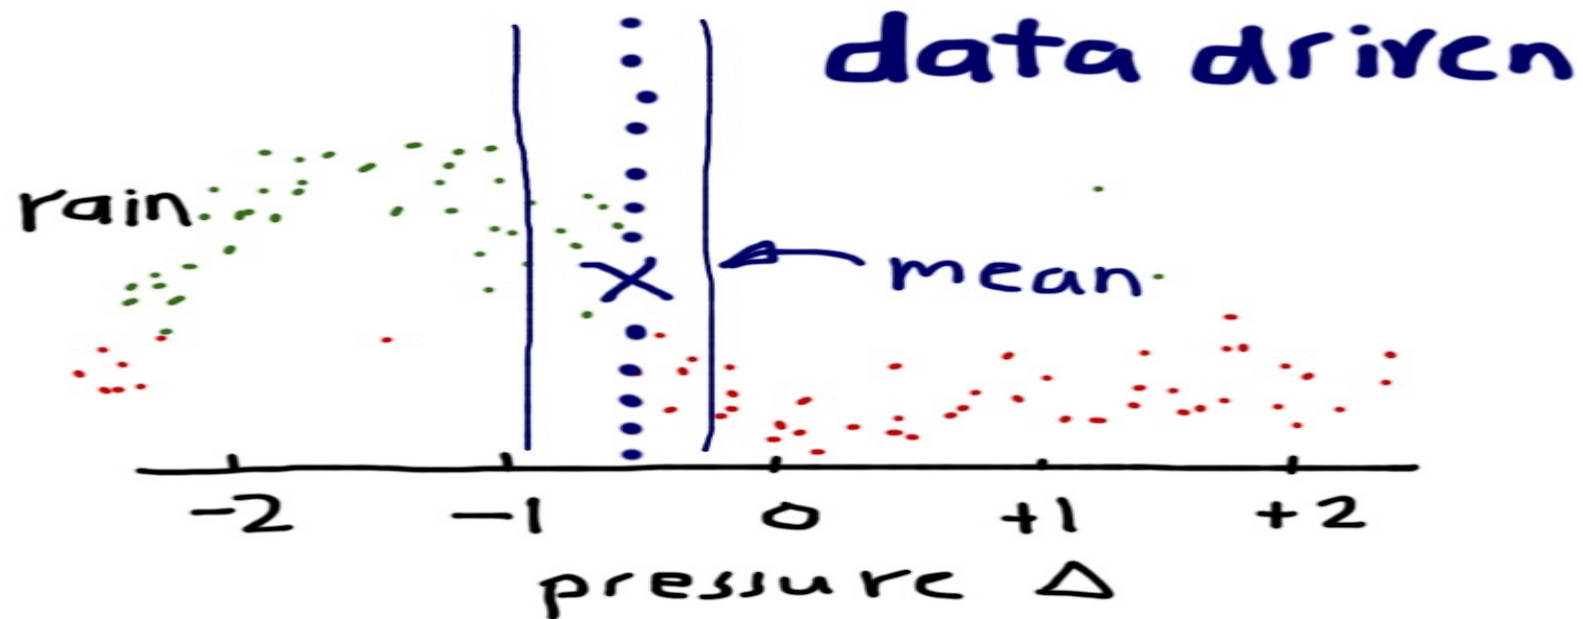

## Solution 2: Data Driven

## Solution 2: Data Driven

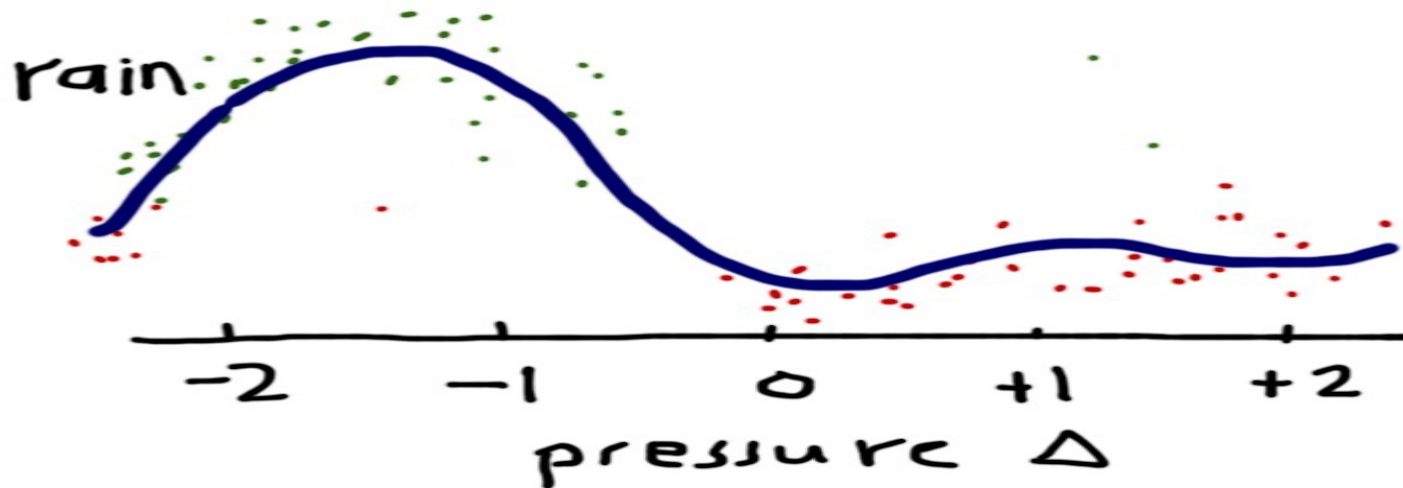

## Solution 2: Data Driven

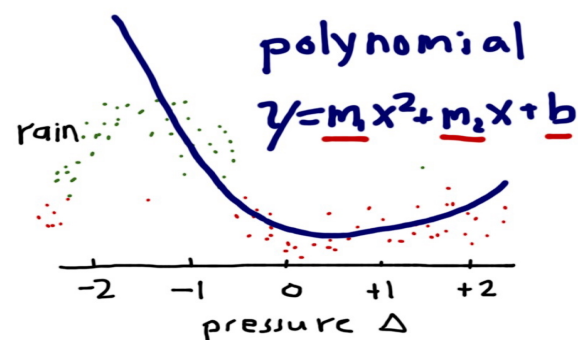

## Solution 2: Data Driven

data driven

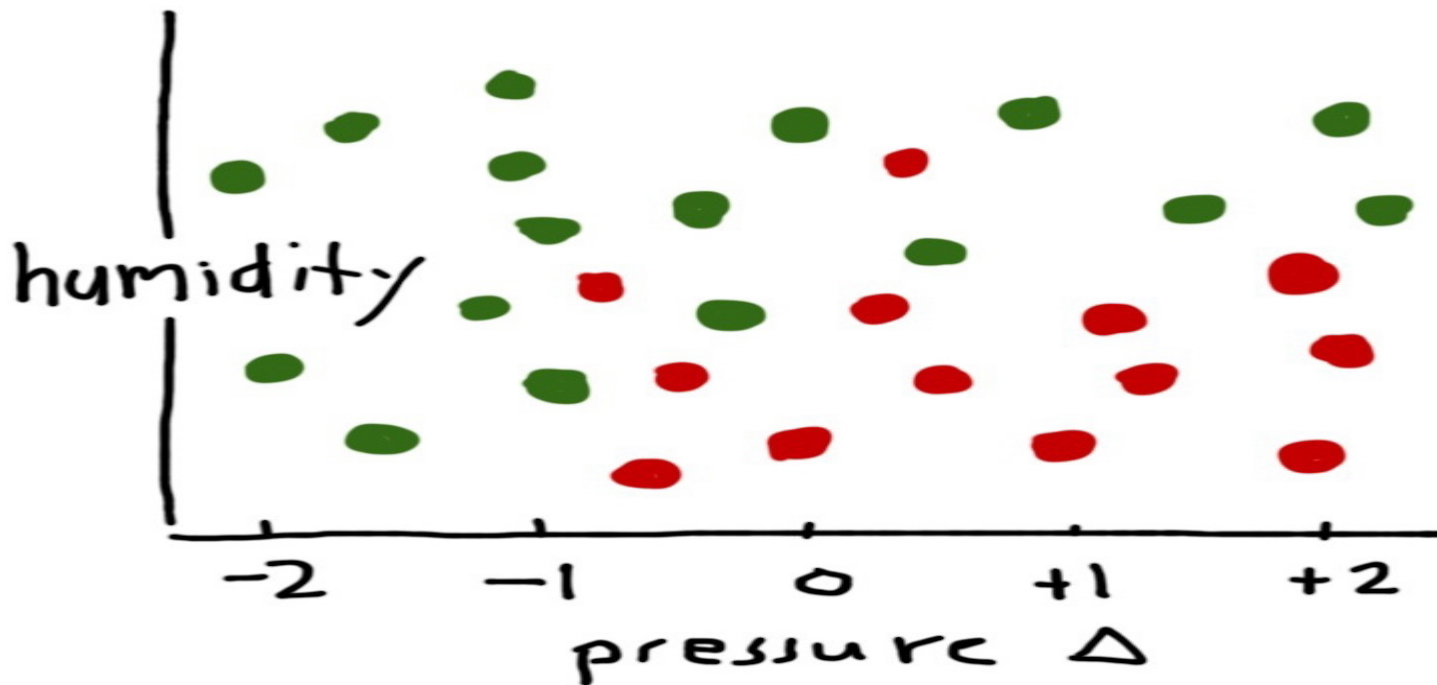

## Data-Driven vs Parametric

- Parametric Model Pros
  - Don't usually over fit
  - Very fast at run time
- Parametric Model Cons
  - Don't model complex non-linear data well
  - Sometimes over simplify
- Data-Driven Model Pros
  - Can model complex data well
  - Easily adapts to more data
- Data-Driven Model Cons
  - Sometimes slow at run time
  - Sometimes over fits

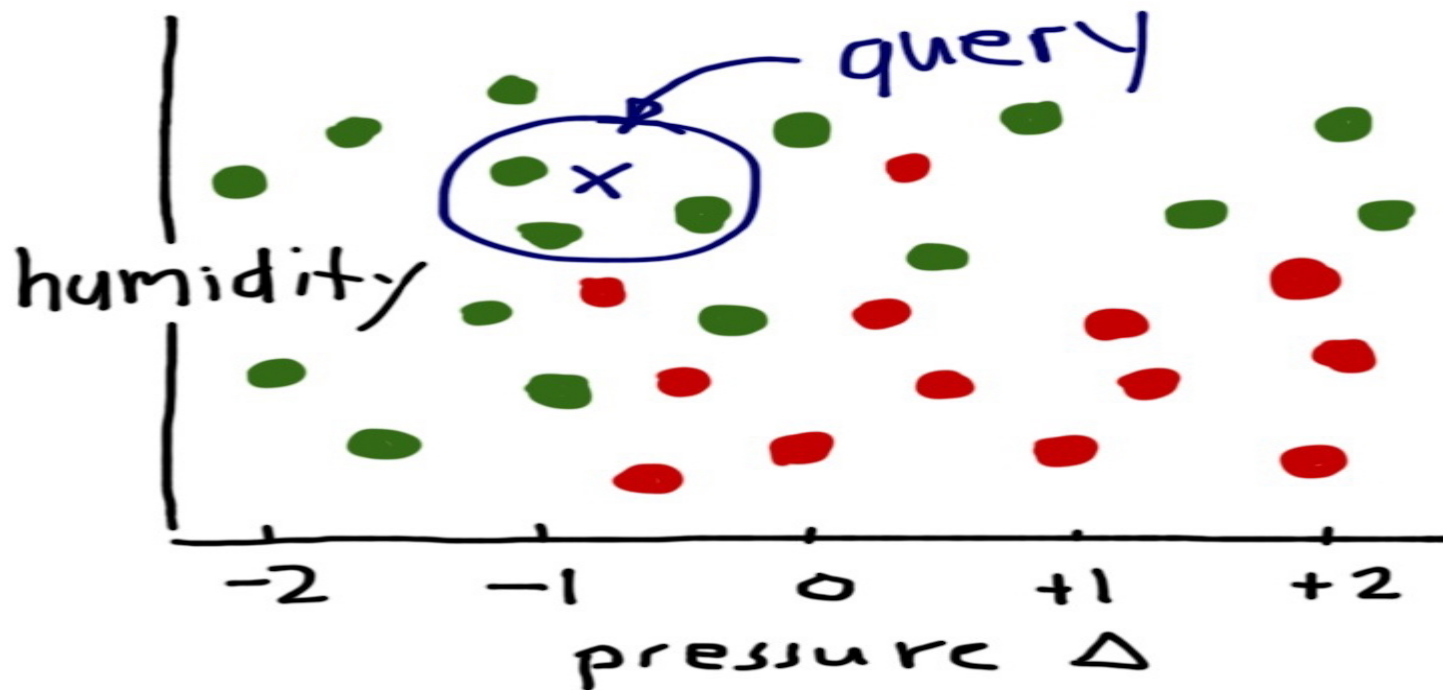

## 2D Data-Driven Model

## 2D Data-Driven Model

## 2D Data-Driven Model

## 2D Data-Driven Model

## Application to Trading & Investing

- We can do the same thing with information about stocks

### **Weather**

Barometric pressure

Humidity

*Rainfall*

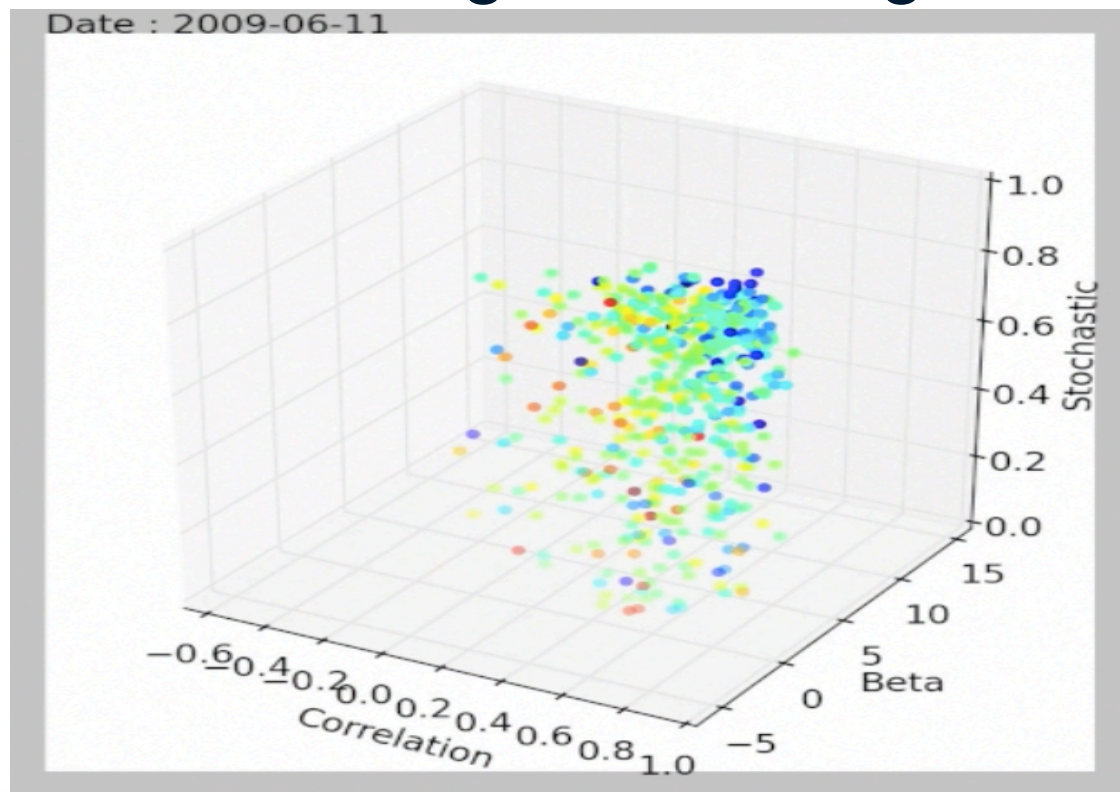

### **Stocks**

P/E Ratio

News

*Future Price*

# Application to Trading & Investing

## Other Considerations

- ⦿ What are the best factors to use?
  - Your insight, or
  - Our number crunching?
- ⦿ Which data to use for models?
- ⦿ How to assess models?
- ⦿ How to prevent over fitting?
